

Away Travel A/B and Multivariate Tests for Proposed Design Changes

Proposal by Jessica Janiszewski

Background

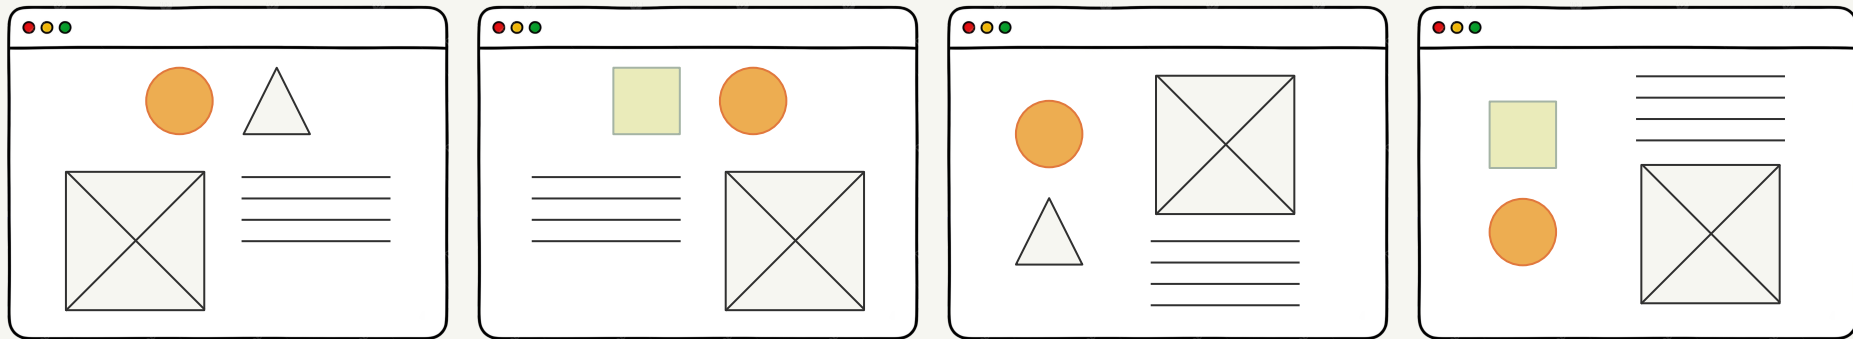

- 1 Defining A/B and MVT
- 2 Why Testing is Important

A/B Test and MVT: What's the Difference?

A/B Tests compare two versions of the same webpage or digital asset

- Version A = test control
- Version B = test changes

Multivariate Tests (MVTs) are used to find the best combination of variables on a webpage or digital asset

Why Testing is Important

Average Cart Abandonment Rate of 70% according to data from the Baymard Institute

- Away Travel annual revenue 2024 = \$73 million
- 70% of Away Travel annual revenue = \$51 million potentially lost

Improved Customer Satisfaction & Improved KPIs = Lower Loss of Revenue

- Potential to recover up to \$18 million in lost revenue

Testing

1 A/B Test: Cart Threshold

2 MVT: Email Capture

A/B Test: Cart Threshold Completion

Our products work better together

The Mini Crossbody
Color: Blush Pink

ADD \$56

Current User Journey

Customer is browsing the luggage category for the desired item.

Customer selects The Carry On and adds it to their cart.

The customer's current order value is \$206. They note the progress bar prompts them to Add More but they are unsure how much more must be added.

Without knowing the actual cost of reaching the threshold, the user ignores the call to action and proceeds to checkout.

The user enters their payment information and completes their purchase at \$206, plus shipping and taxes.

A/B Test: Cart Threshold Completion

Test Version

Top KPIs for improvement

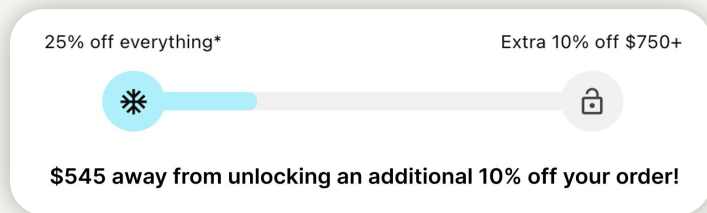

- Average Order Value (AOV) ↗
- Cart Cross-sell Rate ↗

Specific and Actionable language to encourage customers

- Numerical value to associate with progress
- Less uncertainty from users = lower cart abandonment

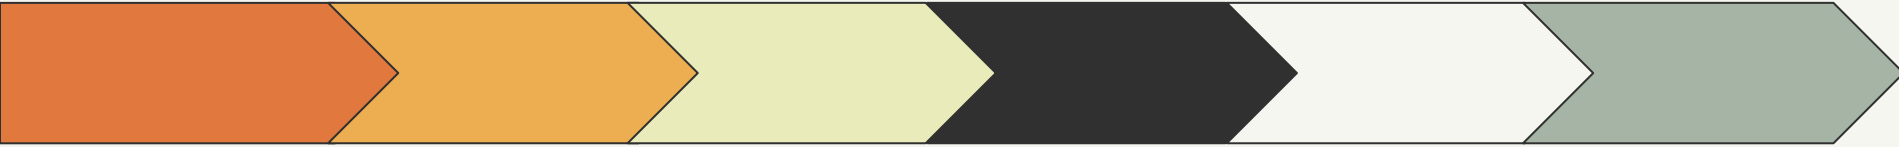

Control (A) Version - 80%

Test (B) Version - 20%

Future User Journey

Customer is browsing the luggage category for the desired item.

Customer selects The Carry On and adds it to their cart.

The customer's current order value is \$206. They note the progress bar prompts them to add \$545 more to gain an extra 10% off.

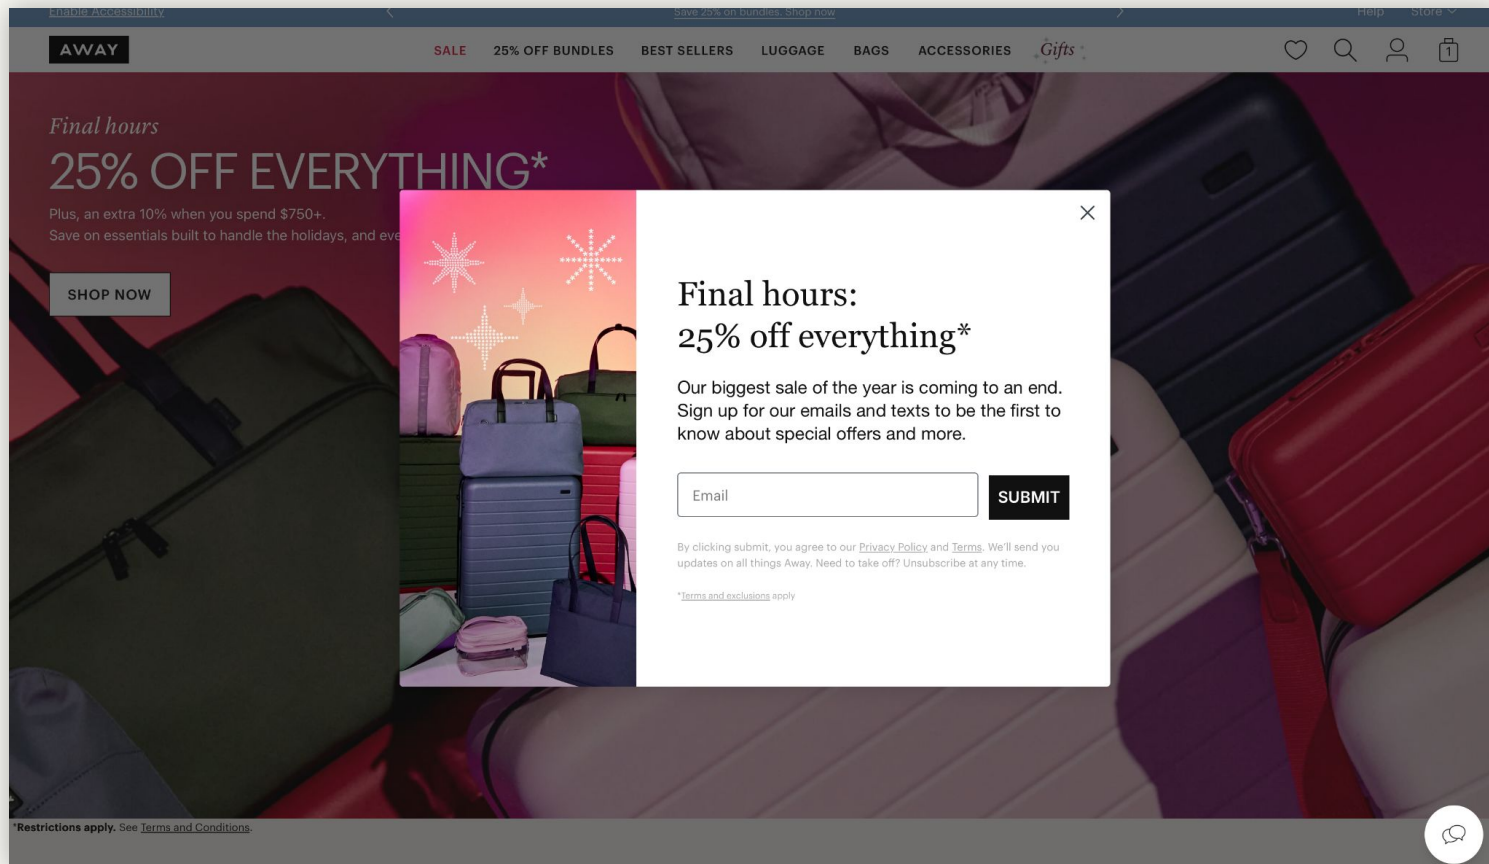

Interested in the extra discount and knowing exactly what it will cost them, the user browses the recommended items in the cart.

The user adds a few items to get their order value over \$750 and unlocks the extra 10% off. They proceed to checkout.

The user enters their payment information and completes their purchase at over \$750, plus shipping and taxes.

MVT: Email Capture Optimization

Test Control

Current User Journey

Customer has landed on the home page of the Away Travel website.

Email capture window appears almost immediately, confusing and frustrating the customer who has not had time to peruse the home page.

With no knowledge of the brand and their value proposition, the customer dismisses the popup without engaging.

The user proceeds to browse and has become more interested in the company, but the email capture window has not reappeared.

The user leaves the website without opting-in to emails.

MVT: Email Capture Optimization

Variable 1: Imagery

SEASONAL

LIFESTYLE

PRODUCT

MVT: Email Capture Optimization

Variable 2: Offers

Be in the Know

Join our email list and be the first to know about special offers, restocks, and more.

EARLY ACCESS

Freebies Await

Sign up today and earn a free set of packing cubes (\$48 value) with your first order.

FREEBIES

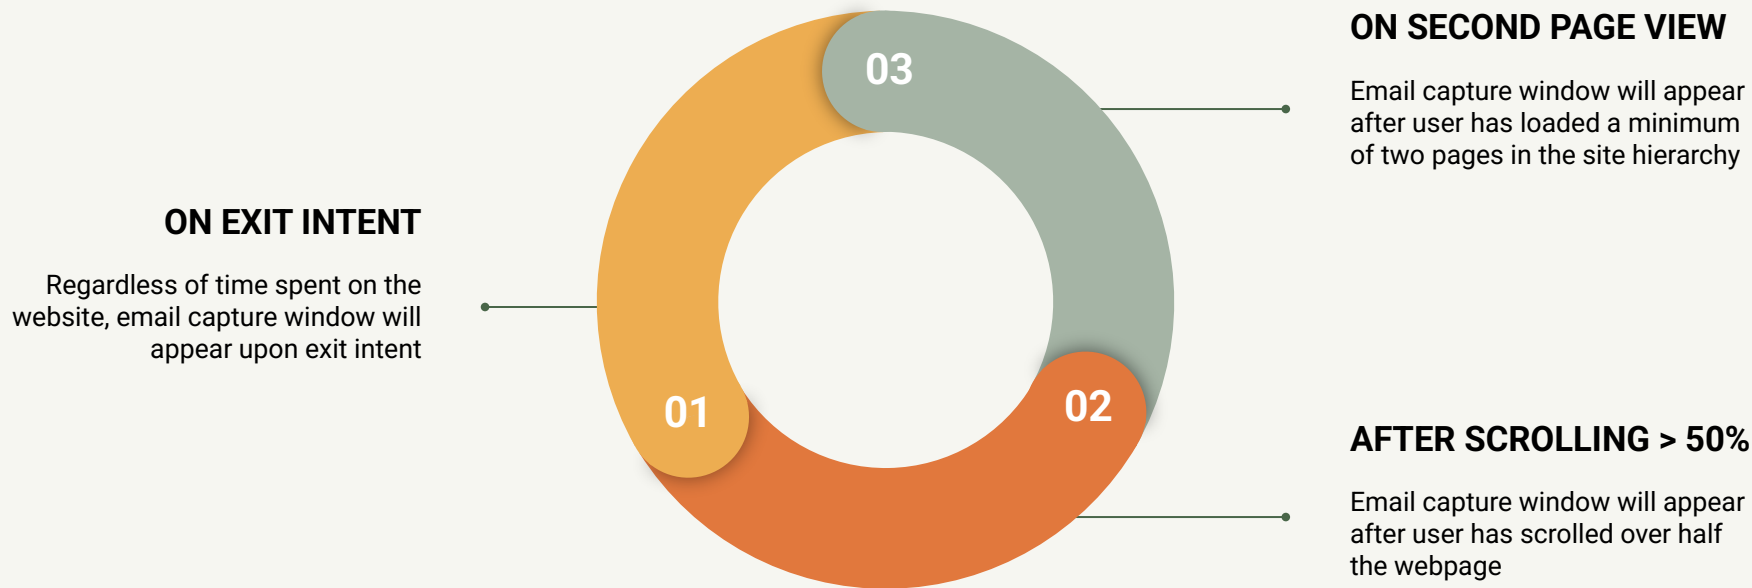

Earn 10% Off Your First Order

New members receive a 10% discount on their first order of luggage, bags, or accessories.

DISCOUNTS

MVT: Email Capture Optimization

Variable 3: Timing

MVT: Email Capture Optimization

Test Version

Top KPIs for improvement

- Email Opt-in Rate 
- Popup Dismissal Rate 

Improved Trigger Timing, Copy, and Imagery will reduce friction and disinterest

- MVT allows the brand to determine the most effective combination of variables
- Perfect timing + good value = higher opt-in rate

NO CHANGES

Control Version - 50%

VAR 1 / VAR 2 / VAR 3

Test Versions - 50%

Future User Journey

Customer has landed on the home page of the Away Travel website.

The customer scrolls through the home page, learning the value proposition of the brand and perusing featured products.

Once the user begins to scroll back up after making it halfway down the page, the email capture window appears with a discount offer.

Interested in the brand and the offer, the user decides to enter their email.

The user leaves the website but will now receive updates, discounts, and reminders from the brand through email.

Thank You
